

Cloud Connect Backup

Efficient Backup Solution for Today's Data Driven World

Cloud Plus has partnered with Veeam to offer Cloud Connect Backup, a straightforward, secure and fully integrated solution that simplifies off-site backups. Cloud Connect Backup enables businesses to extend their backup solution to the cloud without the costs and complexities of deploying and managing offsite infrastructure, VPN tunnels or dedicated repositories. This comprehensive solution also facilitates compliance with the '3-2-1' industry standard for backups.

Integrated into Veeam 8.0 and later versions, Cloud Connect Backup enables secure, fast and efficient cloud backups that are then hosted by Cloud Plus in a major Tier-3 datacentre in Australia. This can be either a primary backup, or in keeping with the 3-2-1 rule, a copy of the primary backup. Once a backup has been completed via Veeam Cloud Connect Backup a Partner or Client will be able to restore entire VM's, virtual drives or objects (such as files) back from the cloud in just a few clicks. In the event of a disaster, there is the option of having Cloud Plus recover VM's into a Cloud Plus Virtual Server or Virtual Datacentre environment as required. Managing backup jobs in Veeam Cloud Connect Backup is simple and intuitive, as it uses the same Veeam console and similar processes as local backup jobs. The new Insider Protection feature allows for deleted backup protection to be switched on for any clients concerned about malicious or accidental deletion of backups by their own staff, ensuring that even deleted backups are kept in a recycle bin for an agreed period.

Simple, Fast and Secure

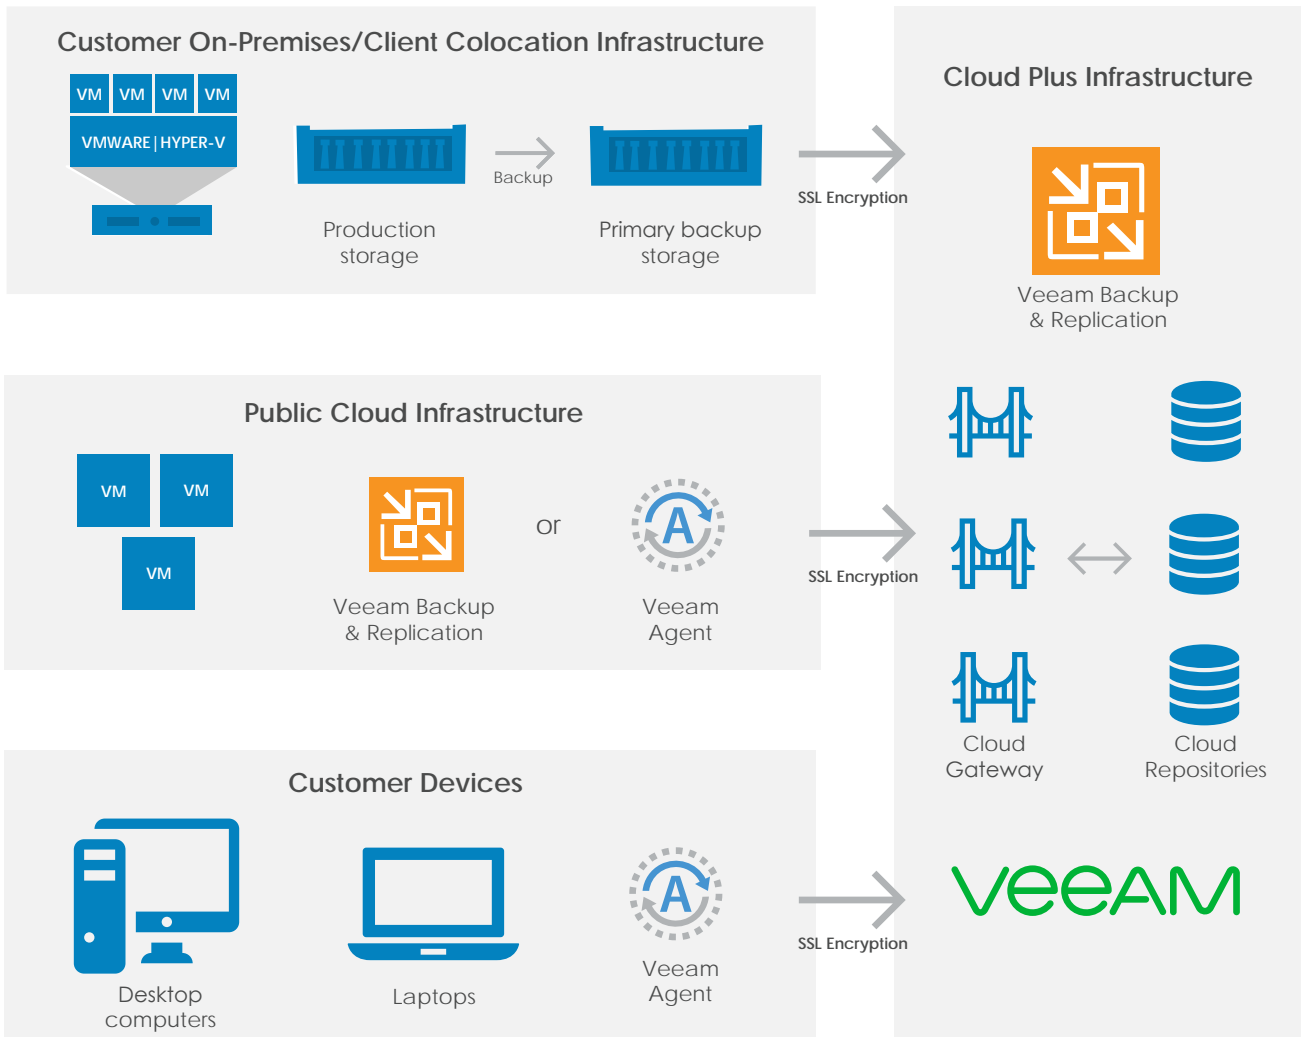

- + Reliable, fast, secure hosted offsite backups
- + Seamless access and full control via Veeam
- + Option to restore to Cloud Plus IaaS if required
- + Insider Protection guards against malicious users
- + Pay-as-you-go hosted backup pricing
- + Pay for only storage & not for data transfer
- + Data is encrypted in transit and optionally at rest
- + Leverage existing Veeam licenses
- + Hosted in major Tier-3 datacentres in Australia

3-2-1 Backup Rule

The 3-2-1 backup rule outlines the requirement to maintain 3 copies of data – 1 primary copy and 2 backup copies – and to store the copies on 2 different storage media. 1 copy must be stored offsite. This last requirement is typically the most challenging for businesses as it can be technically problematic, logistically challenging and expensive. Veeam Cloud Connect Backup removes all of the difficulty of enabling offsite backups and is very cost-effective.

About Cloud Plus

Cloud Plus is an award-winning Australian provider of Private Cloud Solutions with offices in Australia, Philippines and Czech Republic. We operate our own Next Generation Network, Security and Cloud Services infrastructure. With this foundation we are able to deliver highly integrated solutions for our Partners and Clients. Every service that we offer is backed up by the Cloud Plus 100% Committed support and the majority of services are also covered by a 100% Uptime Guarantee, backed by rebates.
